Description

The Two Level tile leveling wedges System is the ultimate solution for achieving a smooth and even tile installation. This innovative tile leveling system comes in two convenient sizes: a plastic box containing 100 spacer clips and 100 leveling wedges, single bags containing 250 spacer clips and 100 wedges. These tile leveling wedges are made of recycled plastic and are both eco-friendly and cost-effective. Its simple design and convenient packaging options make it the ideal choice as a tile leveling system for any installation project, whether commercial or residential.

Material

Made of Recycled plastic material.

Use

The Two Level System is made up of two key components: wedges and spacer clips, which can be easily assembled and adjusted with a plier. This eliminates any differences between tiles during the laying process, resulting in a coplanar and equidistant finish free of lippage. The Spacer Clips come in a range of sizes for grout joints ranging from 0.5mm to 3mm, making them suitable for a variety of tile dimensions and sizes.
